Authors who wish to submit a manuscript should first consult these guidelines, which are in accordance with the “Uniform Requirements for Manuscripts Submitted to Biomedical Journals.”

Care Management Journals
Care Management Journals aims to publish original research, practice-related articles, and book/media reviews on a broad range of topics related to care management, case management, and long term home health care from a multidisciplinary perspective. The journal aims to analyze and describe care management related practices and theories from an international perspective. Research papers may employ either qualitative or quantitative research methods of inquiry including empirical research, naturalistic research, or observational studies. Articles are solicited and reviewed in academic fields and disciplines such as anthropology, sociology, gerontology, nursing, geriatrics, social work, public health, epidemiology, and family health sciences. The journal is strongly committed to multidisciplinary disciplinary research and encourages submissions that transcend traditional disciplinary boundaries.

In addition to publishing original research, the journal also solicits articles that support education about care management for clinicians and researchers. We are particularly interested in program profiles that: 1) introduce readers to new programs and activities that have been implemented in the area of care management, 2) reflections from the field that provide critical reflections on issues in care management (particularly those that explore specific case studies), and 3) explore concepts and ideas for the development of new programs and approaches in care management.

The journal encourages special issues, but potential guest editors should contact one of the editors of the journal prior to submission in order to discuss content.

Manuscript Preparation
Manuscripts should be prepared according to the Publication Manual of the American Psychological Association, 6th Edition, 2009. All articles must be original material, not previously published and not currently under consideration for publication elsewhere. Manuscripts should be typed, double-spaced with one inch margins on one side of 8 1/2 × 11 inch paper. Provide a potential running head of less than seven words.

Original research articles should be between 5,000 and 6,500 words in length, excluding references, but including endnotes. Articles greater in length may be considered, depending upon the relevance of the topic to the aims of the journal. Authors interested in submitting a manuscript over 6,500 words should consult one of the editors prior to submission. Practice and clinically oriented manuscripts should be between 2,000 and 4,000 words in length and book reviews should be no more than 1,000 words.

Abstract
All original research and clinical/practical submissions must include an abstract between 150 and 250 words in length summarizing the article’s scope and findings.
**Titles and Authors’ Names**
In order to facilitate a blind review, the first page of the manuscript should include the titles, authorship, academic degrees, position, address, telephone number, and a short biographical note of the author(s) for publication with the article. Any grant support requiring acknowledgment should be mentioned on this page.

**Keywords**
Authors should supply a list of four words, not appearing in the title, which will be used for indexing.

**Abbreviations**
Except for units of measurement, abbreviations are discouraged. Consult the *APA Publication Manual* for lists of standard abbreviations. The first time an abbreviation appears it should be preceded by the words for which it stands.

**Drug Names**
Generic names should generally be used. When proprietary brands are used in research, include the brand name in parentheses in the Methods section.

**References**
References should be limited to those cited in the text and should follow the style indicated in the *APA Publication Manual*.

**Notes**
All notes follow the text as endnotes, with the endnotes section beginning on a new page. Notes should be restricted to information directly relevant to the text and must be numbered consecutively throughout the text by superscript numerals.

**Tables**
Type tables with double-spacing on separate sheets, and provide a title for each. Designate all artwork by placing the citation (Figure 1) or (Table 2) in the text.

**Illustrations**
Figures should be professionally designed. Glossy black-and-white photographs are requested. Electronic files should be sent as tiff (300 ppi) or eps (800 ppi).

- Photocopied figures are not acceptable. Symbols, lettering and numbering should be clear and large enough to remain legible after the figure has been reduced to fit the width of a single column.
- The back of each figure should include the sequence number, the name of the author, and the proper orientation (e.g., “top”). Do not mount figure on cardboard.
- If photographs of patients are used, either the subjects should not be identifiable or their pictures must be accompanied by written permission to use the figure.
- Legends for illustrations should be typewritten (double-spaced) on a separate sheet and should not appear on the illustrations.
- Contributors are responsible for obtaining written permission from copyright owners for illustrations.
Conflict of Interest
We request that authors of articles do not have any financial interest in a company (or its competitor) that makes a product discussed in the article. Address questions about this issue to the Editor.

Acknowledgments
If applicable, authors should include a brief acknowledgment on the title page. Acknowledgments may include reference to grants or other financial assistance and/or reference to any individual(s) who, although not considered a primary author, contributed to the manuscript. Do not include acknowledgments in the body of your manuscript submission. If your manuscript is accepted for publication, we will add the acknowledgments at a later stage.

Release for Publication
When a paper emanates from or identifies a particular institution, the author is responsible for securing any necessary authorization required by that institution prior to submitting the manuscript. The author is responsible for obtaining written permission of persons who can be identified in the photographs submitted and for obtaining publisher and author permission for the use of copyrighted materials, including illustrations, photographs, and lengthy quotations. When case studies involve actual persons, written release is required.

The copyright act of 1976 requires that all manuscripts submitted for publication be accompanied by the following statement signed and dated by all authors:

“The undersigned author(s) transfer(s) all copyright ownership of the manuscript (insert the title of manuscript) to the Care Management Journals in the event the work is published. The undersigned author(s) warrant(s) that the article is original, is not under consideration by another journal and has not been previously published.”

Copyright
Springer Publishing Company copyrights all articles appearing in the Journals. Accepted manuscripts become the permanent property of the Care Management Journals. Authors are free to use the material elsewhere after it has appeared in print and the publisher has been provided with advance notice. Reprints should carry copyright information and cite the Journals as the original source. Authors will be consulted before permission is granted by the Journals for reprint of articles.

Responsibilities and Permissions
Statements and opinions expressed in articles are those of the author(s). The Editor, Publisher, and reviewers disclaim any responsibility for such statements. Authors are responsible for ensuring the accuracy of statements made in their manuscripts.
• Materials taken from other sources must be accompanied by a written statement from the author and publisher giving permission to the Journal for reproduction.
• Obtain permission in writing from at least one author of papers still in press, unpublished data, and personal communications.

Review and Action
• Care Management Journals uses a rigorous double blind peer review process in which the identities of reviewers and authors are concealed from both parties. Original research manuscripts are initially examined by the editorial staff to insure appropriate content for the journal and are then sent to at least two outside reviewers. Reviewers will comment on
accuracy of information, clarity, organization, and originality of the text as well as its relevance to the Journal’s audience. In some cases, manuscripts may undergo a second review by external readers. Practical/clinical articles undergo review by the editors and may also have external peer review if it is deemed necessary by the editors.

- Authors will be consulted when changes of a technical or substantive nature are made. The responsibility for stylistic changes and necessary cutting as space demands will be assumed by the editorial staff.
- Rejected manuscripts are usually returned to authors within 6 weeks. Decisions about potentially acceptable manuscripts may take somewhat longer.
- All manuscripts accepted for publication are subject to manuscript editing. Complimentary copies of the journal issue in which a finished article appears will be sent to the author(s). Contributors also have the opportunity to obtain offprints.
