# HIDDEN DANGERS OF A.I. WHEN STUDYING FOR

Certification or Licensure Exams

INCOMPLETE EXPLANATIONS

AI-generated questions, rationales, summaries, and definitions for many nursing or licensure exams have not been reviewed by experts. This means you might get only part of the answer without realizing it.
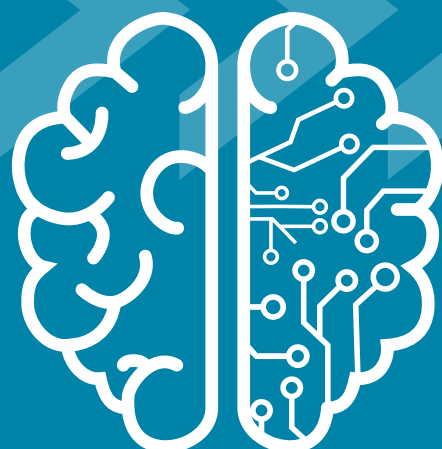

OUTDATED INFORMATION

AI searches for exam blueprints, questions, or topics and can pull data from any source, including those that may be outdated. Since most exams are updated every 3-5 years, AI might provide information that is several decades old.

LACK OF HUMAN INTERACTION

Despite technical glitches, nothing can replace the value of an exam prep instructor, mentor, or study group for collaboration and support.

CONTEXTUAL ERRORS

Just because something is technically accurate doesn't mean that it's correct. AI is adept at finding patterns but often lacks the contextual understanding for full accuracy.

PRIVACY ISSUES

When using certain AI tools, it may be necessary to provide personal information to access their content. As you study, it is important to always choose a trustworthy company before sharing your information, metrics, and activity.
